## 1 Overview

Oracle provides quarterly Security Patch Updates (SPU) to address security vulnerabilities, and Patch Set Updates (PSU) to address proactive, critical fixes and security vulnerabilities. The security vulnerabilities addressed are announced in the Advisory for October 2016, available at:

This document lists the Oracle Database, Fusion Middleware and Enterprise Manager SPU and PSU patches for product releases under error correction. The October 2016 release supersedes earlier Critical Patch Updates and Patch Set Updates for the same product releases. This document is subject to continual update after the initial release, and the changes are listed in "[Modification History](#)." If you print this document, check My Oracle Support to ensure you have the latest version.

This section contains the following:

## 1.1 How To Use This Document

The following steps explain how to use this document.

### Step 1 Assess your Environments

Determine the Oracle product suites and products and their release numbers for each of your environments.

### Step 2 Read Important Announcements

Review "[What's New in October 2016](#)," as it lists documentation and packaging changes along with important announcements such as upcoming final patches.

### Step 3 Determine Patches to be Applied

For each environment, determine which patches need to be applied by using the tables in "[Patch Availability for Oracle Products](#)." There is one availability table for each product suite release, such as Oracle Database 11.1.0.7, Oracle Identity Access Management 11.1.1.5, and Enterprise Manager Grid Control 10.2.0.5

- The table lists the patches to be applied either to the product or to the appropriate product Oracle homes that are associated with the product suite
- The patches are listed in the order released, with newest patches listed first
- For some patches, multiple Oracle homes are listed. Apply the patch to all of the homes indicated that are applicable to your environment and only to the listed Oracle homes
- The table lists only product releases that are under Premier Support or Extended Support and are under error correction as defined in My Oracle Support [Note 209768.1](#), Database, FMW, EM Grid Control, and OCS Software Error Correction Support Policy. Patches are provided only for these releases. If you do not see the release that you have installed, then check "[Final Patch History](#)" and contact Oracle Support for further assistance
- Patches that include security vulnerabilities announced in the current quarter's CPU Advisory, list the vulnerability CVE numbers in the Advisory Number column. If you are interested in the risk matrix for the vulnerabilities fixed in the patch, then see the CPU Advisory at <http://www.oracle.com/technetwork/topics/security/alerts-086861.html>. For patches that are listed from previous quarterly releases, or the current one without any security fixes, the column indicates "Released MMM YYYY"
- When a section is referenced in a table, follow the link to determine which patches to install. For example, when "[Oracle Database](#)" is referenced, determine the Oracle Database release that is installed, and find the patches to apply in the table for that Oracle Database release in "[Oracle Database](#)."

### Step 4 Apply the Patches

Download the patches, review the READMEs, and apply the patches according to the instructions.

## Step 5 Planning for Future Critical Patch Updates

To help you plan for future Critical Patch Updates, this document includes final patch information based on Oracle's Lifetime Support Policy and error correction policies.

"[Final Patch Information \(Error Correction Policies\)](#)" in "[What's New in October 2016](#)," documents product releases for which final Critical Patch Updates are upcoming or are being announced. In each product section, there is also an Error Correction Information Table that documents the final CPU patch for the product. Products that have reached the end of error correction are documented in "[Final Patch History](#)."

### 1.2 Terminology in the Tables

The following terminology is used in this patch availability document and in the subsequent tables.

- **BP** Bundle Patch. An iterative, cumulative patch that is issued between patch sets. Bundle patches usually include only fixes, but some products may include minor enhancements.
- **CPU** Critical Patch Update patch. Prior to October 2012, Security Patch Update (SPU) patches were called Critical Patch Update (CPU) patches. For patches that were previously released as CPU patches, this Patch Availability Document will continue to reference them as CPUs.
- **Final Patch** is the last quarterly cycle until when patches will be provided as per the Premier Support or Extended Support policies. For more information, see [Oracle Lifetime Support Policies](#) at <http://www.oracle.com/us/support/lifetime-support/index.html>.
- **NA** Not Applicable.
- **OR** On-Request. The patch is made available through the On-Request program.
- **PSU** Patch Set Update. An iterative, cumulative patch that contains both security fixes and non-security critical fixes that are high-value and low-risk.
- **SPU** Security Patch Update. An iterative, cumulative patch consisting of security fixes. Formerly known as a Critical Patch Update. Note that Oracle's program for quarterly release of security fixes continues to be called the Critical Patch Update. Patches released as part of this program may be Patch Set Updates, Security Patch Updates, and Bundle Patches. Regardless of the patch type, the patches are cumulative.
- **Overlay SPU** patch provided as an overlay on top of a PSU or BP instead of a base/patch set release.

### 1.3 On-Request Patches

Oracle does not release proactive patches for historically inactive platforms. However, Oracle will deliver these patches when requested.

The following guidelines describe how to initiate an on-request (OR) patch.

A request may be made:

- At any time. However, a patch for a specific quarterly release, such as CPUOct2012, cannot be requested. Depending on when the request is received and processed, either the patch for the current quarterly release or the next quarterly release will be provided. Your Service Request (SR) will provide you the planned availability date for the patch.
- As long as the version is in either Premier Support or Extended Support and error correction support has not expired. For example, if a product release is under Extended Support through the release of CPUJan2013 on January 15, 2013, then you can file a request for the product release through January 29, 2013. For more information, see [Oracle Lifetime Support Policies](#) at <http://www.oracle.com/us/support/lifetime-support/index.html>, and [Note 209768.1](#), Database, FMW, EM Grid Control, and OCS Software Error Correction Support Policy.
- For a platform-version combination when a major release or patch set is released on a platform after a quarterly release date. Oracle will provide the next patch for that platform-version combination, however you may request the current patch by following the on-request process. For example, if a patch is released for a platform on August 1, 2012, Oracle will provide the CPUOct2012 patch for that platform. You may request a CPUJul2012 patch for the platform, and Oracle will review the request and determine whether to provide CPUJul2012 or CPUOct2012.

A patch that is marked as on-request (OR) may already have been requested by another customer and be available on My Oracle Support. Before you file a Service Request (SR), check on My Oracle Support to see if the patch is already available for your platform.

## 1.4 CPU Program and My Oracle Support Patch Recommendations

My Oracle Support patch recommendation features are available on the Patches & Update tab. The patches announced in this document as part of the CPU program are classified as "Security" patch recommendations in My Oracle Support. If a new patch is being announced in this document, then the classification on any earlier patch is changed to "General", causing it to be removed from the My Oracle Support patch recommendations. If a patch has a "Security" classification, and a subsequent bundle, SPU, or PSU is released with a recommendation classification, then it will be classified as a "Security" recommendation in My Oracle Support.

Once a product release is no longer in error correction, its CPU patch information is removed from this document, but the last patch recommendation continues to be available in My Oracle Support. Ensure to select each of the products installed in your environment to obtain all patches.

## 1.5 Oracle Database Patching - SPU vs PSU/BP

The Database Security Patch Updates (SPU) and Patch Set Updates (PSU) / Bundle Patches (BP) that are released each quarter contain the same security fixes. However, they use different patching mechanisms, and PSU/BP include both security and critical fixes.

For more information on Database Patch Delivery Methods see My Oracle Support [Note 1962125.1](#), Oracle Database - Overview of Database Patch Delivery Methods.

**NOTE: Applying a SPU on an installation with an installed PSU/ BP is not supported**

## 1.6 Pro-Active Replacement Interim Patches For Conflicts With Critical Patch Update Program Patches (PSUs and Bundles)

Oracle produces new pro-active patches every quarter as part of the Critical Patch Update program. On Unix platforms, these pro-active patches or bundles may conflict with already installed interim patches. In order to allow such conflicts to be resolved quickly, Oracle pro-actively produces new interim patches for existing patches that would cause conflicts. Replacement patches are made available on the same date that the Database Patch Set Update or Bundle is released.

For more information, see My Oracle Support [Note 1998563.1](#) Pro-Active Replacement Interim Patches For Conflicts With Critical Patch Update Program Patches (PSUs and Bundles).

## 1.7 My Oracle Support (MOS) Conflict Checker Tool

The My Oracle Support (MOS) Conflict Checker tool is available as of July 21, 2014.

You can access MOS Conflict Checker at <https://support.oracle.com/epmos/faces/PatchConflictCheck>. This tool is also accessible from the Patch Search results screen ("Analyze with OPatch" button).

The MOS Conflict Checker Tool allows you to upload an OPatch inventory to check for conflicts with patches to apply to your environment. If no conflicts are found, you can download the patches. If conflicts are found, the tool finds an existing resolution to download. If no resolution is found, you can request a solution, and monitor your request in the Plans region.

For more information and a demonstration video, see Knowledge Document [Note 1091294.1](#), How to use the My Oracle Support Conflict Checker Tool.

# 2 What's New in October 2016

This section describes important changes in October 2016:

- [Section 2.1 Database patch for Engineered Systems and Database In-Memory 12.1.0.2 renamed to "Proactive Bundle Patch 12.1.0.2"](#)
- [Section 2.2 "Change to Bundle Patch Numbering"](#)
- [Section 2.3 "Final Patch Information \(Error Correction Policies\)"](#)

- [Section 2.4 "Changes to Database READMEs"](#)
- [Section 2.5 "Post Release Patches"](#)
- [Section 2.6 "Behavior Changes starting in OPatch 12.2.0.1.5 and 11.2.0.3.14 releases"](#)

## **2.1 Database patch for Engineered Systems and Database In-Memory 12.1.0.2 renamed to "Proactive Bundle Patch 12.1.0.2"**

Starting from Apr2016 onwards the prior Database Bundle that was called "Database patch for Engineered Systems and Database In-Memory 12.1.0.2" will now be called "Proactive Bundle Patch 12.1.0.2". This patch will continue to be a cumulative patch and will include all prior fixes. The Apr2016 Proactive BP can also be applied on top of the Jan2016 "Database patch for Engineered Systems and Database In-Memory 12.1.0.2".

## **2.2 Change to Bundle Patch Numbering**

As of November 2015, the version numbering for new Bundle Patches, Patch Set Updates, and Security Patch Updates for Oracle Database, Enterprise Manager and Middleware products have a new format. This new format replaces the numeric 5th digit of the bundle version with a release date in the form YYMMDD:

- YY is the last 2 digits of the year
- MM is the numeric month (2 digits)
- DD is the numeric day of the month (2 digits)

Note that the release date is the release date of the main bundle, PSU, or SPU.

Some bundles may continue to use a numeric 5th digit in the short term, but they will transition to the new format over time.

This new version format makes it easier to see which bundle patches are from which time frame, and in particular, which patches are from the same Critical Patch Update release. For examples and more information, see My Oracle Support [Note 2061926.1](#), Oracle Database, Enterprise Manager and Middleware - Change to Patch Numbering from Nov 2015 onwards.

## **2.3 Final Patch Information (Error Correction Policies)**

The Final patch is the last CPU or PSU release for which the product release is under error correction. Final patches for upcoming releases, as well as newly scheduled final patches, are listed in the following sections.

### **Final patches scheduled for January 2017**

### **Final patches scheduled for October 2016**

- Oracle Access Manager 10gR3 (10.1.4.x)
- Oracle Access Manager WebGates/ASDK 10gR3 (10.1.4.x)
- Oracle WebLogic Server Proxy Plug-In 10gR3 (formerly known as WebLogic Server Proxy Plug-In 1.0)
- Oracle Outside In Technology 8.5.1
- Oracle Audit Vault 10.3
- Oracle Secure Backup 10.4.x

### **Newly Scheduled final patches:**

- Oracle Database 12.1.0.2 - July 2021 (See MOS [Note 742060.1](#))
- Oracle Database 11.2.0.4 - October 2020 (See MOS [Note 742060.1](#))

For additional final patch history information, see "[Final Patch History](#)". For information on the error correction support policy for patches, refer to My Oracle Support [Note 209768.1](#), Database, FMW, EM Grid Control, and OCS Software Error Correction Support Policy.

## **2.4 Changes to Database READMEs**

Oracle JavaVM (OJVM) Component Database PSU patches now require database instances to be started in "startup upgrade" mode prior to running the required post-installation SQL scripts.

## 2.5 Post Release Patches

## 2.6 Behavior Changes starting in OPatch 12.2.0.1.5 and 11.2.0.3.14 releases

Beginning in OPatch 12.2.0.1.5 and 11.2.0.3.14 there is a behavior change in the way superset patches address subset. Additionally, in OPatch 12.2.0.1.5 OVM has been removed. Please see the following for additional information:

Note: 2161861.1 OPatch: Behavior Changes starting in OPatch 12.2.0.1.5 and 11.2.0.3.14 releases

**Note: These releases of OPatch are not necessarily the minimum version of OPatch. Please review the required the minimum version of OPatch as documented in each patch's README.**

#### 3.1.5.1 Patch Availability for Oracle Database

For Oracle Database 10.2.0.4 and later releases, customers have the option to install the Security Patch Update (SPU) or the Patch Set Update (PSU). Both patch types are cumulative patches. The PSU includes the security vulnerability bug fixes, as well as additional non-security bug fixes recommended by Oracle. For more information on PSU patches, see My Oracle Support [Note 854428.1](#), Patch Set Updates (PSUs) for Oracle Products.

For the Microsoft Windows platforms, Oracle Database patches are released as cumulative patch bundles. You may install the indicated patch or [later](#) bundle in the Database Windows bundle series. The Windows patch bundles include the security vulnerability bug fixes, the PSU recommended non-security bug fixes, and other customer-requested bug fixes.
